

Below is an image. Replicate it using the canvas element in an HTML5 page. The original is 400 px by 200 px. If the image below is not that size here, scale it to that size. This is to test the precision of one of your capabilities. We should find that the colors, shapes, shape positions, and stroke thicknesses are all precisely understood and replicated in an HTML5 page, in addition to your receiving and understanding these instructions.
